

BBQ Orifice Cleaning Instructions

- 1) Remove the cooking grills
- 2) Undo the nut holding on the burner and slide out the burner
- 3) Undo the 3 screws holding on the regulator box and remove from the unit
- 4) Locate the brass orifice inside the box
- 5) Use a small needle or tiny drill bit to clean the opening. Be careful to not ream out the hole to a larger size as this would increase the propane flow of the orifice and could create a dangerous situation
- 6) Re-attach the regulator box to the unit. Ensure the screws are tight
- 7) Slide the burner back into the unit making sure the end is seated over top of the orifice properly. Secure with nut.
- 8) Replace the cooking grills
