

## 7" Burner Assembly Parts

**Split Ring** - The split ring sits on top of the 7" burner and finishes the narrowing of the air path.

**Leg Ring** – Sits on top of the stainless burner ring. Continues the narrowing of the air path and speeds the air up. Also holds more heat to aid in the continued vaporizing of the fuel.

**S/S Burner Ring** – Sits on top of three protruding studs in the burner. Speeds the air by narrowing the gap which causes the vaporized fuel to rise to the top of the burner.
